LES□L Series

In-line motor type/D type

LES□D Series

High Rigidity Type LESH Series

High rigidity Deflection: 0.016 mm* * LESH16-50 Load: 25 N

Integration of the guide rail and the table Uses a circulating linear guide.

Positioning pin hole

Improved workpiece mounting reproducibility

Workpiece mounting tap

Body mounting through-hole

Can be mounted from the top.

Compact, Space-saving

For LESH8 R/L, 50 mm stroke

Reduced by 61% in volume*

* Compared with the LESH16-50/LXSH-50
* For R/L type

Motor integrated into the body

Built-in motor

Integration of the guide rail and the table

2 types of motors selectable

Step motor (Servo/24 VDC)

Ideal for transfer of high load at a low speed and pushing operation

Servo motor (24 VDC)

Stable at high speed and silent operation

Non-magnetizing lock mechanism (Option)

Prevents workpieces from dropping (holding)

Manual override screw

Adjustment operation possible when power OFF

Application Examples

Positioning of pallets on a conveyor

Z motion for pick and place

Model Selection 1

LES Series ▶ Page 324

Selection Procedure

For the high rigidity type LESH series, refer to page 340

- Step 1** Check the work load-speed. → **Step 2** Check the cycle time. → **Step 3** Check the allowable moment.

Selection Example

Step 1 Check the work load-speed. <Speed-Work load graph> (Page 315)

Select the target model based on the workpiece mass and speed with reference to the <Speed-Work load graph>.

Selection example) The LES16□J-50 is temporarily selected based on the graph shown on the right side.

Step 2 Check the cycle time.

It is possible to obtain an approximate cycle time by using method 1, but if a more detailed cycle time is required, use method 2.

Method 1: Check the cycle time graph. (Page 316)

Method 2: Calculation <Speed-Work load graph> (Page 315)

Calculate the cycle time using the following calculation method.

Calculation example)

T1 to T4 can be calculated as follows.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be obtained by the following equation.

$$T1 = V/a1 \text{ [s]}$$

$$T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load and in position of the step data. Therefore, calculate the settling time with reference to the following value.

$$T4 = 0.15 \text{ [s]}$$

$$T1 = V/a1 = 220/5000 = 0.04 \text{ [s]}$$

$$T3 = V/a2 = 220/5000 = 0.04 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{50 - 0.5 \cdot 220 \cdot (0.04 + 0.04)}{220} = 0.19 \text{ [s]}$$

$$T4 = 0.15 \text{ [s]}$$

Therefore, the cycle time can be obtained as follows.

$$T = T1 + T2 + T3 + T4 = 0.04 + 0.19 + 0.04 + 0.15 = 0.42 \text{ [s]}$$

Operating conditions

- Workpiece mass: 1 [kg]
- Workpiece mounting condition:
- Speed: 220 [mm/s]
- Mounting orientation: Vertical
- Stroke: 50 [mm]
- Acceleration/Deceleration: 5000 [mm/s²]
- Cycle time: 0.5 seconds

LES16□/Step Motor Vertical

<Speed-Work load graph>

LES16□/Step Motor

<Cycle time>

LES16/Pitching

<Dynamic allowable moment>

Step 3 Check the allowable moment. <Static allowable moment> (Page 316)

<Dynamic allowable moment> (Pages 317, 318)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the LES16□J-50 is selected.

Dynamic Allowable Moment

Acceleration/Deceleration — 5000 mm/s²

Calculation of Guide Load Factor

- Decide operating conditions.

Model: LES

Size: 8/16/25

Mounting orientation: Horizontal/Bottom/Wall/Vertical

- Select the target graph with reference to the model, size and mounting orientation.
- Based on the acceleration and work load, obtain the overhang [mm]: $Lx/Ly/Lz$ from the graph.

- Calculate the load factor for each direction.

$$\alpha x = Xc/Lx, \alpha y = Yc/Ly, \alpha z = Zc/Lz$$

- Confirm the total of αx , αy and αz is 1 or less.

$$\alpha x + \alpha y + \alpha z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

Acceleration [mm/s²]: a

Work load [kg]: m

Work load center position [mm]: $Xc/Yc/Zc$

Mounting orientation

Example

- Operating conditions

Model: LES

Size: 8

Mounting orientation: Horizontal

Acceleration [mm/s²]: 5000

Work load [kg]: 0.6

Work load center position [mm]: $Xc = 50, Yc = 30, Zc = 60$

- Select three graphs from the top of the left side first row on page 317.

- $Lx = 220$ mm, $Ly = 135$ mm, $Lz = 250$ mm

- The load factor for each direction can be obtained as follows.

$$\alpha x = 50/220 = 0.23$$

$$\alpha y = 30/135 = 0.22$$

$$\alpha z = 60/250 = 0.24$$

- $\alpha x + \alpha y + \alpha z = 0.69 \leq 1$

Model Selection 2

Selection Procedure

For the high rigidity type LESH series, refer to page 346.

Selection Example

Operating conditions

- Pushing force: 90 [N]
- Workpiece mass: 1 [kg]
- Speed: 100 [mm/s]
- Stroke: 100 [mm]
- Mounting orientation: Vertical upward
- Pushing time + Operation (A): 1.5 seconds
- All cycle time (B): 6 seconds

Step 1 Check the required force.

Calculate the approximate required force for pushing operation.
Selection example) • Pushing force: 90 [N]

- Workpiece mass: 1 [kg]
- Therefore, the approximate required force can be obtained as $90 + 10 = 100$ [N].

Select the target model based on the approximate required force with reference to the specifications (Pages 326 and 327).

Selection example) Based on the specifications,

- Approximate required force: 100 [N]
 - Speed: 100 [mm/s]
- Therefore, the LES25□ is temporarily selected.

Then, calculate the required force for pushing operation.

If the mounting position is vertical upward, add the actuator table weight.

Selection example) Based on the <Table weight>,

- LES25□ table weight: 0.5 [kg]
- Therefore, the required force can be obtained as $100 + 5 = 105$ [N].

Step 2 Check the set value of pushing force.

<Set value of pushing force–Force graph> (Page 321)

Select the target model based on the required force with reference to the <Set value of pushing force–Force graph>, and confirm the set value of pushing force.

Selection example) Based on the graph shown on the right side,

- Required force: 105 [N]
- Therefore, the LES25□K is temporarily selected.
This set value of pushing force is 40 [%].

Step 3 Check the duty ratio.

Confirm the allowable duty ratio based on the set value of pushing force with reference to the <Allowable duty ratio>.

Selection example) Based on the <Allowable duty ratio>,

- Set value of pushing force: 40 [%]
- Therefore, the allowable duty ratio can be obtained as 30 [%].

Calculate the duty ratio for operating conditions, and confirm it does not exceed the allowable duty ratio.

Selection example) • Pushing time + Operation (A): 1.5 seconds

- All cycle time (B): 6 seconds
- Therefore, the duty ratio can be obtained as $1.5/6 \times 100 = 25$ [%], and this is the allowable range.

Based on the above calculation result, the LES25□K-100 is selected.

For allowable moment, the selection procedure is the same as the positioning control.

Table Weight

[kg]

Model	Stroke [mm]

* LES25DA is not available.

⚠ Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LES series and the controller LEC series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

② For the servo motor (24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA).

Refer to page 568 for the noise filter set. Refer to the LECA Operation Manual for installation.

③ CC-Link direct input type (LECPMJ) is not CE-compliant.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

	Type	Non-magnetizing lock					
	Holding force [N]	24	2.5	300	48	500	77
	Power consumption [W] ^{Note 10)}	3.5		2.9		5	
Rated voltage [V]	24 VDC ±10%						

Note 1) Speed changes according to the work load. Check "Speed-Work Load Graph (Guide)" on page 315.

Note 2) Pushing force accuracy is ±20% (F.S.).

Note 3) The speed and force may change depending on the cable length, load and mounting conditions. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. (At 15 m: Reduced by up to 20%)

Note 4) A reference value for correcting an error in reciprocal operation.

Note 5) Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Note 6) The power consumption (including the controller) is for when the actuator is operating.

Note 7) The standby power consumption when operating (including the controller) is for when the actuator is stopped in the set position during the operation. Except during the pushing operation.

Note 8) The maximum instantaneous power consumption (including the controller) is for when the actuator is operating. This value can be used for the selection of the power supply.

Note 9) With lock only

Note 10) For an actuator with lock, add the power consumption for the lock.

Model Selection 1

LESH Series ▶ Page 350

Selection Procedure

For the compact type LES series, refer to page 314.

Step 1 Check the work load-speed. → **Step 2** Check the cycle time. → **Step 3** Check the allowable moment.

Selection Example

Step 1 Check the work load-speed. <Speed-Work load graph> (Page 341)

Select the target model based on the workpiece mass and speed with reference to the <Speed-Work load graph>.

Selection example) The LESH16□J-50 is temporarily selected based on the graph shown on the right side.

Step 2 Check the cycle time.

It is possible to obtain an approximate cycle time by using method 1, but if a more detailed cycle time is required, use method 2.

* Although it is possible to make a suitable selection by using method 1, this calculation is based on a maximum load condition. Therefore, if a more detailed selection for each load is required, use method 2.

Method 1: Check the cycle time graph. (Page 342)

Method 2: Calculation <Speed-Work load graph> (Page 341)

Calculate the cycle time using the following calculation method.

Calculation example)

T1 to T4 can be calculated as follows.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be obtained by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load and in position of the step data. Therefore, calculate the settling time with reference to the following value.

$$T4 = 0.15 \text{ [s]}$$

$$T1 = V/a1 = 220/5000 = 0.04 \text{ [s]}$$

$$T3 = V/a2 = 220/5000 = 0.04 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{50 - 0.5 \cdot 220 \cdot (0.04 + 0.04)}{220} = 0.19 \text{ [s]}$$

$$T4 = 0.15 \text{ [s]}$$

Therefore, the cycle time can be obtained as follows.

$$T = T1 + T2 + T3 + T4 = 0.04 + 0.19 + 0.04 + 0.15 = 0.42 \text{ [s]}$$

Operating conditions

- Workpiece mass: 1 [kg]
- Workpiece mounting condition:
- Speed: 220 [mm/s]
- Mounting orientation: Vertical
- Stroke: 50 [mm]
- Acceleration/Deceleration: 5000 [mm/s²]
- Cycle time: 0.5 seconds

LESH16□/Step Motor Vertical

<Speed-Work load graph>

LESH16□/Step Motor

<Cycle time>

LESH16/Pitching

<Dynamic allowable moment>

Step 3 Check the allowable moment. <Static allowable moment> (Page 342)

<Dynamic allowable moment> (Pages 343, 344)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the LESH16□J-50 is selected.

Dynamic Allowable Moment

Acceleration/Deceleration — 5000 mm/s²

Calculation of Guide Load Factor

- Decide operating conditions.

Model: LESH

Size: 8/16/25

Mounting orientation: Horizontal/Bottom/Wall/Vertical

- Select the target graph with reference to the model, size and mounting orientation.

- Based on the acceleration and work load, obtain the overhang [mm]: $Lx/Ly/Lz$ from the graph.

- Calculate the load factor for each direction.

$$\alpha x = Xc/Lx, \alpha y = Yc/Ly, \alpha z = Zc/Lz$$

- Confirm the total of αx , αy and αz is 1 or less.

$$\alpha x + \alpha y + \alpha z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

Acceleration [mm/s²]: a

Work load [kg]: m

Work load center position [mm]: $Xc/Yc/Zc$

Mounting orientation

Model: LESH

Size: 8

Mounting orientation: Horizontal

Acceleration [mm/s²]: 5000

Work load [kg]: 1.0

Work load center position [mm]: $Xc = 80, Yc = 100, Zc = 60$

- Select three graphs from the top of the left side first row on page 343.

- $Lx = 480$ mm, $Ly = 225$ mm, $Lz = 1200$ mm

- The load factor for each direction can be obtained as follows.

$$\alpha x = 80/480 = 0.17$$

$$\alpha y = 100/225 = 0.44$$

$$\alpha z = 60/1200 = 0.05$$

- $\alpha x + \alpha y + \alpha z = 0.66 \leq 1$

Model Selection 2

Selection Procedure

For the compact type LES series, refer to page 320.

Selection Example

Operating conditions

- Pushing force: 90 [N]
- Workpiece mass: 1 [kg]
- Speed: 100 [mm/s]
- Stroke: 100 [mm]
- Mounting orientation: Vertical upward
- Pushing time + Operation (A): 1.5 seconds
- All cycle time (B): 6 seconds

Step 1 Check the required force.

Calculate the approximate required force for pushing operation.
Selection example) • Pushing force: 90 [N]

- Workpiece mass: 1 [kg]
- Therefore, the approximate required force can be obtained as $90 + 10 = 100$ [N].

Select the target model based on the approximate required force with reference to the specifications (Pages 352 and 353).

Selection example) Based on the specifications,

- Approximate required force: 100 [N]
 - Speed: 100 [mm/s]
- Therefore, the LESH25□ is temporarily selected.

Then, calculate the required force for pushing operation.

If the mounting position is vertical upward, add the actuator table weight.

Selection example) Based on the <Table weight>,

- LESH25□ table weight: 1.3 [kg]
- Therefore, the required force can be obtained as $100 + 13 = 113$ [N].

Step 2 Check the set value of pushing force.

<Set value of pushing force–Force graph> (Page 347)

Select the target model based on the required force with reference to the <Set value of pushing force–Force graph>, and confirm the set value of pushing force.

Selection example) Based on the graph shown on the right side,

- Required force: 113 [N]
- Therefore, the LESH25□K is temporarily selected.
This set value of pushing force is 40 [%].

Step 3 Check the duty ratio.

Confirm the allowable duty ratio based on the set value of pushing force with reference to the <Allowable duty ratio>.

Selection example) Based on the <Allowable duty ratio>,

- Set value of pushing force: 40 [%]
- Therefore, the allowable duty ratio can be obtained as 30 [%].

Calculate the duty ratio for operating conditions, and confirm it does not exceed the allowable duty ratio.

- Pushing time + Operation (A): 1.5 seconds
- All cycle time (B): 6 seconds

Therefore, the duty ratio can be obtained as $1.5/6 \times 100 = 25$ [%], and this is the allowable range.

Based on the above calculation result, the LESH25□K-100 is selected.

For allowable moment, the selection procedure is the same as the positioning control.

Table Weight

[kg]

Model	Stroke [mm]			
	50	75	100	150
LESH8	0.2	0.3	—	—
LESH16	0.4	—	0.7	—
LESH25	0.9	—	1.3	1.7

* If the mounting position is vertical upward, add the table weight.

LESH25□/Step Motor

<Set value of pushing force–Force graph>

Allowable Duty Ratio

Step Motor (Servo/24 VDC)

Set value of pushing force (%)	Duty ratio (%)	Continuous pushing time (minute)
30	—	—
50 or less	30 or less	5 or less
70 or less	20 or less	3 or less

Servo Motor (24 VDC)

Set value of pushing force (%)	Duty ratio (%)	Continuous pushing time (minute)
50	—	—
75 or less	30 or less	5 or less
100 or less	20 or less	3 or less

* The pushing force of the LESH□A is up to 75%.

A	Servo motor* (24 VDC)	LECA6

* LESH25DA is not available.

⚠ Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LES series and the controller LEC series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

② For the servo motor (24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA).

Refer to page 568 for the noise filter set. Refer to the LECA Operation Manual for installation.

③ CC-Link direct input type (LECPMJ) is not CE-compliant.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

④ Lead [mm]

Symbol	LESH8	LESH16	LESH25

* R/L type with lock is not available.

⑥ Motor option

Nil	Without option
B	With lock

⑦ Body option

Nil	Without option
S	Dust-protected*

* For R/L type (IP5X equivalent), a scraper is mounted on the rod cover, and gaskets are mounted on both the end covers. For D type, a scraper is mounted on the rod cover.

The actuator and controller/driver are sold as a package.

Confirm that the combination of the controller/driver and the actuator is correct.

<Check the following before use.>

- ① Check the actuator label for model number. This matches the controller/driver.
- ② Check Parallel I/O configuration matches (NPN or PNP).

* Refer to the operation manual for using the products. Please download it via our website, <http://www.smcworld.com>

AN	LECPA*2 *4
AP	(Pulse input type)

*1 For details about controller/driver and compatible motor, refer to the compatible controller/driver below.

*2 Only available for the motor type "Step motor."

*3 Not applicable to CE.

*4 When pulse signals are open collector, order the current limiting resistor (LEC-PA-R-□) on page 596 separately.

12 I/O cable length*1, Communication plug

Nil	Without cable (Without communication plug connector)*3
1	1.5 m
3	3 m*2
5	5 m*2
S	Straight type communication plug connector*3
T	T-branch type communication plug connector*3

*1 When "Without controller/driver" is selected for controller/driver types, I/O cable cannot be selected. Refer to page 568 (For LECP6/LECA6), page 582 (For LECP1) or page 596 (For LECPA) if I/O cable is required.

*2 When "Pulse input type" is selected for controller/driver types, pulse input usable only with differential. Only 1.5 m cables usable with open collector.

*3 For the LECPMJ, only "Nil", "S" and "T" are selectable since I/O cable is not included.

13 Controller/Driver mounting

Nil	Screw mounting
D	DIN rail mounting*

* DIN rail is not included. Order it separately.

Note 1) Speed changes according to the work load. Check "Speed-Work Load Graph (Guide)" on page 341.

Note 2) Pushing force accuracy is ±20% (F.S.).

Note 3) The speed and force may change depending on the cable length, load and mounting conditions. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. (At 15 m: Reduced by up to 20%)

Note 4) A reference value for correcting an error in reciprocal operation.

Note 5) Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Note 6) The power consumption (including the controller) is for when the actuator is operating.

Note 7) The standby power consumption when operating (including the controller) is for when the actuator is stopped in the set position during the operation. Except during the pushing operation.

Note 8) The maximum instantaneous power consumption (including the controller) is for when the actuator is operating. This value can be used for the selection of the power supply.

Note 9) With lock only

Note 10) For an actuator with lock, add the power consumption for the lock.

LES/LESH Series Electric Slide Tables/ Specific Product Precautions 1

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 8 for Electric Actuator Precautions.

Design

Caution

1. Do not apply a load in excess of the specification limits.

Select a suitable actuator by work load and allowable moment. If the product is used outside of the specification limits, the eccentric load applied to the guide will be excessive and have adverse effects such as creating play on the guide, degrading accuracy and shortening the life of the product.

2. Do not use the product in applications where excessive external force or impact force is applied to it.

This can cause failure.

Handling

Caution

1. INP output signal

1) Positioning operation

When the product comes within the set range by step data [In position], the INP output signal will turn on.

Initial value: Set to [0.50] or higher.

2) Pushing operation

When the effective force exceeds step data [Trigger LV], the INP output signal will turn on. Use the product within the specified range of [Pushing force] and [Trigger LV].

To ensure that the actuator pushes the workpiece with the set [Pushing force], it is recommended that the [Trigger LV] be set to the same value as the [Pushing force].

2. When the pushing operation is used, be sure to set to [Pushing operation]. Never hit at the stroke end except during return to origin.

When incorrect instructions are inputted, such as using the product outside of the specification limits or operation outside of actual stroke through changes in the controller/driver setting and/or origin position, the table may collide against the stroke end of the actuator. Check these points before use.

If the table collides against the stroke end of the actuator, the guide, belt or internal stopper can be broken. This may lead to abnormal operation.

Handle the actuator with care when it is used in the vertical direction as the workpiece will fall freely from its own weight.

3. Use the product with the following moving force.

- Step motor (Servo/24 VDC): 100%
- Servo motor (24 VDC) : 250%

If the moving force is set below the above values, it may cause an alarm.

Handling

Caution

4. The actual speed of this actuator is affected by the load.

Check the model selection section of the catalog.

5. Do not apply a load, impact or resistance in addition to the transferred load during return to origin.

Additional force will cause the displacement of the origin position since it is based on detected motor torque.

6. The table and guide block are made of special stainless steel, but can rust in an environment where droplets of water adhere to it.

7. Do not dent, scratch or cause other damage to the body, table and end plate mounting surfaces.

This may cause unevenness in the mounting surface, play in the guide or an increase in the sliding resistance.

8. Do not dent, scratch or cause other damage to the surface over which the rail and guide will move.

This may cause play or an increase in the sliding resistance.

9. Do not apply strong impact or an excessive moment while mounting a workpiece.

If an external force over the allowable moment is applied, it may cause play in the guide or an increase in the sliding resistance.

10. Keep the flatness of mounting surface 0.02 mm or less.

Unevenness of a workpiece or base mounted on the body of the product may cause play on the guide and increased sliding resistance. Do not deform the mounting surface by mounting with workpieces tucked in.

11. Do not drive the main body with the table fixed.

12. When mounting the product, for R/L type fixed cable, keep the following dimension or more for bends in the cable. For D type, keep a 40 mm or longer diameter for bends in the cable.

LES/LESH Series

Electric Slide Tables/ Specific Product Precautions 2

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 8 for Electric Actuator Precautions.

Handling

⚠ Caution

13. When mounting the product, use screws with adequate length and tighten them to the maximum torque or less.

Tightening the screws with a higher torque than recommended may cause a malfunction, whilst the tightening with a lower torque can cause the displacement of the mounting position or in extreme conditions the actuator could become detached from its mounting position.

Body fixed/ Side mounting (Body tapped)

Model	Screw size	Max. tightening torque [N·m]	L [mm] (Max. screw-in depth)
LES-18R/L	M4 x 0.7	1.5	8
LES-18D	M5 x 0.8	3	10
LES16R/L			
LES16D	M6 x 1	5.2	12
LESH16□			
LES25R/L			
LES25D	M8 x 1.25	10	16
LESH25□			

Body fixed/ Side mounting (Through-hole)

Model	Screw size	Max. tightening torque [N·m]	L [mm]
LES8R/L	M3 x 0.5	0.63	23.5
LES8R/L			25.5
LES-18D	M4 x 0.7	1.5	18.2
LES16R/L			33.5
LES16D			25.2
LESH16R/L	M5 x 0.8	3	35.5
LESH16D			25.5
LES25R/L			49
LES25D			39.8
LESH25R/L	M6 x 1	5.2	50.5
LESH25D			39.5

Workpiece fixed/ Front mounting

Model	Screw size	Max. tightening torque [N·m]	L [mm]
LES8R/L	M3 x 0.5	0.63	6
LES8R/L			5.5
LES-18D	M4 x 0.7	1.5	
LES16R/L			8
LES16D	M5 x 0.8	3	
LESH16□			12
LES25R/L			10
LES25D	M6 x 1	5.2	14

To prevent the workpiece retaining screws from penetrating the end plate, use screws that are 0.5 mm or shorter than the maximum screw-in depth. If long screws are used, they can touch the end plate and cause a malfunction.

Workpiece fixed/ Top mounting

Model	Screw size	Max. tightening torque [N·m]	L [mm] (Min. to Max. screw-in depth)
LES8□	M3 x 0.5	0.63	2.1 to 4.1
LESH8□			5 (Max.)
LES16□	M4 x 0.7	1.5	2.7 to 5.7
LESH16□			6.5 (Max.)
LES25□	M5 x 0.8	3	3.3 to 7.3
LESH25□	M6 x 1	5.2	8 (Max.)

To prevent the workpiece retaining screws from touching the guide block, use screws that are the maximum screw-in depth or less. If long screws are used, they can touch the guide block and cause a malfunction.

Body fixed/Side mounting (Side holder)

Model	Screw size	Max. tightening torque [N·m]	L [mm]
LES-18D	M4 x 0.7	1.5	6.7
LES-16D	M5 x 0.8	3	8.3
LES-25D	M6 x 1	5.2	12

When using the side holders to install the actuator, be sure to use the positioning pin. It can be displaced when vibration or excessive external force is applied.

Positioning pin

14. In pushing operation, set the product to a position of at least 0.5 mm away from a workpiece. (This position is referred to as a pushing start position.)

If the product is set to the same position as a workpiece, the following alarms may be generated and operation may become unstable.

a. "Posn failed" alarm is generated.

The product cannot reach a pushing start position due to variation in the width of workpieces.

b. "Pushing ALM" alarm is generated.

The product is pushed back from a pushing start position after starting to push.

15. When external force is applied to the table, it is necessary to reduce the work load for the sizing.

When a cable duct or flexible moving tube is attached to the actuator, the sliding resistance of the table increases and may lead to operational failure of the product.

16. When using the side holders to install the actuator, use within the following dimension range.

Otherwise, installation balance will deteriorate and cause loosening.

Model	L [mm]
LES-18D□-30	5 to 10
LES-18D□-50	20 to 30
LES-18D□-75	50 to 60
LES-16D□-30	5 to 10
LES-16D□-50	20 to 30
LES-16D□-75	60 to 75
LES-16D□-100	85 to 100
LES-25D□-30	5 to 15
LES-25D□-50	25 to 35
LES-25D□-75	60 to 75
LES-25D□-100	70 to 100
LES-25D□-125	155 to 170
LES-25D□-150	160 to 180

17. For the LES□□D, do not grasp or peel off a masking tape on the bottom of the body.

The masking tape may peel off and foreign matter may get inside the actuator.

18. For the LES□□D, a gap will form between the motor flange and table when the table moves (marked with the arrow below). Be careful not to put hands or fingers in a gap.

LES/LESH Series Electric Slide Tables/ Specific Product Precautions 3

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 8 for Electric Actuator Precautions.

Handling

⚠ Caution

19. When mounting the body with through-holes in the following mounting orientations, make sure to use two side holders as shown in the figures.

Otherwise, installation balance will deteriorate and cause loosening.

Bottom mounting

Wall mounting

Vertical mounting

20. Install the body as shown below with the ○.

Since the product support becomes unstable, it may cause a malfunction, noise or an increase in the deflection.

21. Even with the same product number, the table of some products can be moved by hand and the table of some products cannot be moved by hand. However, there is no abnormality with these products. (Without lock)

This difference is caused because there is a little variation with the positive efficiency (when the table is moved by the motor) and there is a large variation with the reverse-efficiency (when the table is moved manually) due to the product characteristics. There is hardly any difference among products when they are operated by the motor.

Handling

⚠ Caution

22. For LES□□^R_L, remove the cap and operate the manual override screw with a hexagon wrench.

Maintenance

⚠ Warning

1. Ensure that the power supply is stopped before starting maintenance work or replacement of the product.
2. For lubrication, wear protective glasses.
3. Perform maintenance according to the following requirements.

• Maintenance frequency

Perform maintenance according to the table below.

Frequency	Appearance check	Belt check
Inspection before daily operation	○	—
Inspection every 6 months*	—	○
Inspection every 250 km*	—	○
Inspection every 5 million cycles*	—	○

* Select whichever comes first.

• Items for visual appearance check

1. Loose set screws, Abnormal dirt
2. Check of flaw and cable joint
3. Vibration, Noise

• Items for belt check (R/L type only)

Stop operation immediately and replace the belt when belt appear to be below.

- a. Tooth shape canvas is worn out.**
Canvas fiber becomes fuzzy. Rubber is removed and the fiber becomes whitish. Lines of fibers become unclear.
- b. Peeling off or wearing of the side of the belt**
Belt corner becomes round and frayed thread sticks out.
- c. Belt partially cut**
Belt is partially cut. Foreign matter caught in teeth other than cut part causes flaw.
- d. Vertical line of belt teeth**
Flaw which is made when the belt runs on the flange.
- e. Rubber back of the belt is softened and sticky.**
- f. Crack on the back of the belt**
