### Large flow rate

Flow rate

**20% More flow\***

(Size 1)

\* Comparison with SMC current  
model

### Body material

Air  
Aluminum, Resin  
Water/Oil/  
Medium vacuum/Steam  
C37 (Brass),  
Stainless steel

With One-touch fittings  
(Resin body)

Bracket  
Standard  
equipment

### Manifold

Material • Body/PPS  
• Base/Aluminum  
• Seal/NBR, FKM

### Compact

Height

**10% Smaller\***

(Size 1)

### Lightweight

Weight

**30% Lighter\***

(Size 1, Aluminum body)

Current model

VX

### Enclosure

**IP65\***

\* Electrical entry  
Flat terminal type  
terminal is IP40.

### Power consumption

**4.5 W** (Size 1)

**7 W** (Size 2)

**10.5 W** (Size 3)

(DC/N.C. valve)

### Solenoid coil type

• Insulation type Class B/H  
• Fluid temperature  
Class B/Max. 60°C  
Class H/Max. 183°C

### Valve type

N.C.

N.O.

# Direct Operated 2 Port Solenoid Valve

Air

Medium vacuum

Water

Oil

Steam

\* Can be used with heated water.

**Enclosure**  
IP65

**Flame resistance**  
UL94V-0 conformed  
Flame resistant mold coil material

**Low-noise construction**  
Metal noise reduced by the rubber bumper

**Piping variations**  
Thread piping, One-touch fitting

## Clearance

By providing a bumper and clearance, we reduced the collision sound of the core when ON (when the valve is open). Because of the clearance, when using highly viscous fluids such as oil, the armature does not get stuck and the responsiveness when OFF (when the valve is closed) is improved.

## Power consumption

\* DC/Class B, N.C. valve

**4.5 W** (Size 1)

**7 W** (Size 2)

**10.5 W** (Size 3)

## Improved armature durability

## Body material

**Air** Aluminum, Resin

**Water/Oil/Medium vacuum/Steam** C37 (Brass), Stainless steel

## Full-wave rectifier type (AC specification: Insulation type Class B/H)

### Improved durability

Service life is extended by the special construction. (compared with current shading coil)

### Reduced buzz noise

Rectified to DC by the full-wave rectifier, resulting in a buzz noise reduction.

### Reduced apparent power

\* Class B, N.C. valve  
10 VA → **7 VA** (Size 1)    20 VA → **9.5 VA** (Size 2)  
32 VA → **12 VA** (Size 3)

### Improved OFF response

Specially constructed to improve the OFF response when operated with a higher viscosity fluid such as oil.

### Low-noise construction

Specially constructed to reduce the metal noise during operation.

# Direct Operated 2 Port Solenoid Valve

## VX21/22/23 Series

For Air, Medium Vacuum, Water, Oil and Steam

### Variations

#### Single Unit (For Air, Medium Vacuum, Water, Oil and Steam)

##### Valve type

Normally Closed (N.C.)  
Normally Open (N.O.)

##### Solenoid coil type

Insulation type: Class B, Class H

##### Rated voltage

100 V/200 V/110 V/230 VAC  
(220 V/240 V/48 V/24 VAC)  
24 VDC (12 VDC)

Voltage in ( ) indicates special voltage.

##### Material

Body — Aluminum, Resin, C37 (Brass),  
Stainless steel  
Seal — NBR, FKM\*

\* Refer to individual pages for details of each fluid.

##### Electrical entry

- Grommet
- Conduit
- DIN terminal
- Conduit terminal
- Flat terminal

##### Normally Closed (N.C.)

##### Normally Open (N.O.)

# VX21/22/23 Series

## Common Specifications

### Standard Specifications

Valve specifications	Valve construction		Direct operated poppet
	Withstand pressure		2.0 MPa (Resin body type 1.5 MPa)
	Body material		Aluminum, Resin, C37 (Brass), Stainless steel
	Seal material <small>Note 3)</small>		NBR, FKM
	Enclosure		Dust-tight, Water-jet-proof type (IP65) <small>Note 1,4)</small>
	Environment		Location without corrosive or explosive gases
Coil specifications	Rated voltage	AC	100 VAC, 200 VAC, 110 VAC, 230 VAC, (220 VAC, 240 VAC, 48 VAC, 24 VAC) <small>Note 2)</small>
		DC	24 VDC, (12 VDC) <small>Note 2)</small>
	Allowable voltage fluctuation		±10% of rated voltage
	Allowable leakage voltage	AC	5% or less of rated voltage
		DC	2% or less of rated voltage
	Coil insulation type		Class B, Class H

Note 1) Electrical entry flat terminal type terminal is IP40.

Note 2) Voltage in ( ) indicates special voltage. (Refer to page 49.)

Note 3) For seal material/EPDM, refer to X332. (Refer to page 51.)

Note 4) For enclosure, refer to "Glossary of Terms" on page 65. When using the product in a place which requires water resistance, please contact SMC.

△ Be sure to read "Specific Product Precautions" before handling.

### Solenoid Coil Specifications

#### Normally Closed (N.C.)

##### DC Specification

###### Class B

Size	Power consumption (W) <small>Note 1)</small>	Temperature rise (°C) <small>Note 2)</small>
Size 1	4.5	50
Size 2	7	55
Size 3	10.5	65

###### Class H

Size	Power consumption (W) <small>Note 1)</small>	Temperature rise (°C) <small>Note 2)</small>
Size 1	9	100
Size 2	12	100
Size 3	15	100

Note 1) Power consumption: The value at ambient temperature of 20°C and when the rated voltage is applied. (Variation: ±10%)

Note 2) The value at ambient temperature of 20°C and when the rated voltage is applied. The value depends on the ambient environment. This is for reference.

#### AC Specification (Built-in Full-wave Rectifier Type)

##### Class B

Size	Apparent power (VA) <small>Note 1) 2)</small>	Temperature rise (°C) <small>Note 3)</small>
Size 1	7	60
Size 2	9.5	70
Size 3	12	70

##### Class H

Size	Apparent power (VA) <small>Note 1) 2)</small>	Temperature rise (°C) <small>Note 3)</small>
Size 1	9	100
Size 2	12	100
Size 3	15	100

Note 1) Apparent power: The value at ambient temperature of 20°C and when the rated voltage is applied. (Variation: ±10%)

Note 2) There is no difference in the frequency and the inrush and energized apparent power, since a rectifying circuit is used in the AC.

Note 3) The value at ambient temperature of 20°C and when the rated voltage is applied. The value depends on the ambient environment. This is for reference.

#### Normally Open (N.O.)

##### DC Specification

###### Class B

Size	Power consumption (W) <small>Note 1)</small>	Temperature rise (°C) <small>Note 2)</small>
Size 1	7.5	60
Size 2	8.5	70
Size 3	12.5	70

###### Class H

Size	Power consumption (W) <small>Note 1)</small>	Temperature rise (°C) <small>Note 2)</small>
Size 1	9	100
Size 2	12	100
Size 3	15	100

Note 1) Power consumption: The value at ambient temperature of 20°C and when the rated voltage is applied. (Variation: ±10%)

Note 2) The value at ambient temperature of 20°C and when the rated voltage is applied. The value depends on the ambient environment. This is for reference.

#### AC Specification (Built-in Full-wave Rectifier Type)

##### Class B

Size	Apparent power (VA) <small>Note 1) 2)</small>	Temperature rise (°C) <small>Note 3)</small>
Size 1	9	60
Size 2	10	70
Size 3	14	70

##### Class H

Size	Apparent power (VA) <small>Note 1) 2)</small>	Temperature rise (°C) <small>Note 3)</small>
Size 1	9	100
Size 2	12	100
Size 3	15	100

Note 1) Apparent power: The value at ambient temperature of 20°C and when the rated voltage is applied. (Variation: ±10%)

Note 2) There is no difference in the frequency and the inrush and energized apparent power, since a rectifying circuit is used in the AC.

Note 3) The value at ambient temperature of 20°C and when the rated voltage is applied. The value depends on the ambient environment. This is for reference.

## Selection Steps

### Selection Steps

#### Step 1 Select the fluid.

Item	Selection item	Page	Symbol
Select the fluid.	Air	Page 33, 34	0
	Water	Page 42	2
	Oil	Page 44	3
	Medium vacuum	Page 38	4
	Steam	Page 46	5

VX2 3 0 A A

#### Step 2 Select "Body material", "Port size" and "Orifice diameter" from "Flow rate — Pressure" of each fluid.

Item	Selection item	Symbol
Select from "Flow rate — Pressure." • Body material • Port size • Orifice diameter	Size	Size 3
	Body material	Aluminum
	Port size	1/8
	Orifice diameter	2

VX2 3 0 A A

#### Step 3 Select electrical specification.

Item	Selection item	Symbol
Select electrical specification.	Voltage	24 VDC
	Electrical entry	Grommet

VX2 3 0 A A

#### Step 4 For special options, refer to pages 49 to 51.

# For Air Single Unit

## Model/Valve Specifications

N.C.

Symbol

When the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

## Aluminum Body Type

Size	Port size	Orifice diameter (mm) <sup>Note 1)</sup>	Model	Flow rate characteristics <sup>Note 2)</sup>			Maximum operating pressure differential (MPa) <sup>Note 4)</sup>	Max. system pressure (MPa) <sup>Note 4)</sup>	Weight (g) <sup>Note 3)</sup>
				C [dm <sup>3</sup> /(s·bar)]	b	Cv

		3		1.25	0.34	0.35	0.6		220
		5		1.45	0.43	0.40	0.2		220
	ø8	2		0.82	0.44	0.23	1.0		220
		3		1.81	0.40	0.41	0.6		220
		5		2.11	0.32	0.56	0.2		220
2	ø8	4	VX220	1.69	0.40	0.47	1.0		340
		7		3.14	0.34	0.84	0.15		340
		4		1.68	0.49	0.50	1.0		340
	ø10	7		3.54	0.36	0.90	0.15		340
		5		2.50	0.44	0.70	1.0		460
		8		2.77	0.82	1.22	0.3		460
3	ø10	10	VX230	5.69	0.46	1.54	0.1		460
		5		2.50	0.44	0.70	1.0		460
		8		2.56	0.88	1.38	0.3		460
	ø12	8		5.69	0.64	1.76	0.1		460
		10							
		10							

Note 1) The orifice size is just as a reference guide. Check the flow rate characteristics (conversion Cv).

Note 2) The flow rate characteristics of this product have variations.

When the highly precise flow control is required according to the system to be used, select an orifice diameter 1.3 times larger than that shown above and install a restrictor on the downstream side of the solenoid valve to make the adjustment.

Note 3) Weight of grommet type. Add 10 g for conduit type, 30 g for DIN terminal type, 60 g for conduit terminal type respectively.

Note 4) Refer to "Glossary of Terms" on page 65 for details on the maximum operating pressure differential and the maximum system pressure.

## Fluid and Ambient Temperature

Fluid temperature (°C)	Ambient temperature (°C)
-10 <sup>Note)</sup> to 60	-20 to 60

Note) Dew point temperature: -10°C or less

## Valve Leakage Rate

### Internal Leakage

Seal material <sup>Note 2)</sup>	Leakage rate (Air) <sup>Note 1)</sup>
NBR (FKM)	1 cm <sup>3</sup> /min or less (Aluminum body type) 15 cm <sup>3</sup> /min or less (Resin body type)

### External Leakage

Seal material <sup>Note 2)</sup>	Leakage rate (Air) <sup>Note 1)</sup>
NBR (FKM)	1 cm <sup>3</sup> /min or less (Aluminum body type) 15 cm <sup>3</sup> /min or less (Resin body type)

Note 1) Leakage is the value at ambient temperature 20°C.

Note 2) For seal material/FKM, refer to "Other Options" on page 49 for the selection.

Note 3) The amount of leakage is the value at a differential pressure of 0.01 MPa or more, and a temperature of 20°C. If the differential pressure is less than 0.01 MPa, please contact SMC.

# VX21/22/23 Series

## For Air Single Unit

### Model/Valve Specifications

N.O.

#### Symbol

When the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

#### Aluminum Body Type

Size	Port size	Orifice diameter (mm) <sup>Note 1)</sup>	Model	Flow rate characteristics <sup>Note 2)</sup>			Maximum operating pressure differential (MPa) <sup>Note 4)</sup>	Max. system pressure (MPa) <sup>Note 4)</sup>	Weight (g) <sup>Note 3)</sup>

### Model/Valve Specifications

**N.C.**

**Symbol**

**N.O.**

**Symbol**

When the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

#### Normally Closed (N.C.)

Size	Orifice diameter (mm) <sup>Note 1)</sup>	Model	Flow rate characteristics <sup>Note 2)</sup>			Maximum operating pressure differential (MPa) <sup>Note 3)</sup>	Max. system pressure (MPa) <sup>Note 3)</sup>
			C [dm <sup>3</sup> /(s·bar)]	b	Cv		
1	2	VX2A0	0.63	0.63	0.23	1.0	1.0
	3		1.05	0.68	0.41	0.6	
	5		2.20	0.39	0.62	0.2	
2	4	VX2B0	1.90	0.52	0.62	1.0	
	7		3.99	0.44	1.08	0.15	
3	5	VX2C0	1.96	0.55	0.75	1.0	
	7		3.99	0.44	1.08	0.3	

#### Normally Open (N.O.)

Size	Orifice diameter (mm) <sup>Note 1)</sup>	Model	Flow rate characteristics <sup>Note 2)</sup>			Maximum operating pressure differential (MPa) <sup>Note 3)</sup>	Max. system pressure (MPa) <sup>Note 3)</sup>
			C [dm <sup>3</sup> /(s·bar)]	b	Cv		
1	2	VX2D0	0.63	0.63	0.23	0.9	1.0
	3		1.05	0.68	0.41	0.45	
	5		2.20	0.39	0.62	0.2	
2	4	VX2E0	1.90	0.52	0.62	0.8	
	7		3.99	0.44	1.08	0.15	
3	5	VX2F0	1.96	0.55	0.75	0.8	
	7		3.99	0.44	1.08	0.3	

Note 1) The orifice size is just as a reference guide. Check the flow rate characteristics (conversion Cv).

Note 2) The flow rate characteristics of this product have variations.

When the highly precise flow control is required according to the system to be used, select an orifice diameter 1.3 times larger than that shown above and install a restrictor on the downstream side of the solenoid valve to make the adjustment.

Note 3) Refer to "Glossary of Terms" on page 65 for details on the maximum operating pressure differential and the maximum system pressure.

### Fluid and Ambient Temperature

Fluid temperature (°C)	Ambient temperature (°C)
-10 <sup>Note)</sup> to 60	-20 to 60

Note) Dew point temperature: -10°C or less

### Valve Leakage Rate

#### Internal Leakage

Seal material <sup>Note 2)</sup>	Leakage rate <sup>Note 1)</sup>
NBR (FKM)	1 cm <sup>3</sup> /min or less

#### External Leakage

Seal material <sup>Note 2)</sup>	Leakage rate <sup>Note 1)</sup>
NBR (FKM)	1 cm <sup>3</sup> /min or less

Note 1) Leakage is the value at ambient temperature 20°C.

Note 2) For seal material/FKM, refer to "Other Options" on page 49 for the selection.

Note 3) The amount of leakage is the value at a differential pressure of 0.01 MPa or more, and a temperature of 20°C. If the differential pressure is less than 0.01 MPa, please contact SMC.

## Blanking Plate Assembly Part No.

For size 1 **VVX021S-4A-N**

For size 2 **VVX022S-4A-N**

For size 3 **VVX023S-4A-N**

When mounting a blanking plate assembly, if the solenoid valve for the manifold is ozone resistant, (Seal material: FKM), please select FKM.

Seal material	
N	NBR
F	FKM

Dimensions → Page 63

## How to Order Manifold Assembly (Example)

Enter the valve and blanking plate to be mounted under the manifold base part number.

<Example>

VVX210B05.....1

≈ VX2A0AA .....4

≈ VVX021S-4A-N .....1

→ “≈” is the symbol for mounting.

Add an “s” in front of the part numbers for solenoid valves etc. to be mounted.

D side (Stations) 1 2 3 4 5 U side

Enter the product's part number in order, counting the 1st station from the D side (left in the manifold arrangement, when viewing the individual port in front).

## For Oil Single Unit

\* This valve can also be used with air or water.  
(Refer to the valve specifications for air or water.)

**⚠ When the fluid is oil.**

**The kinematic viscosity must not exceed 50 mm<sup>2</sup>/s.**  
The special construction of the armature adopted in the built-in full-wave rectifier type gives an improvement in OFF response by providing clearance on the absorbed surface when it is switched ON.

### Model/Valve Specifications

#### Symbol

**N.C.**

When the valve is closed, flow is blocked from port 1 to port 2.  
However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

#### Symbol

**N.O.**

When the valve is closed, flow is blocked from port 1 to port 2.  
However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

#### Normally Closed (N.C.)

Size	Port size	Orifice diameter (mm) <sup>Note 1)</sup>	Model	Flow rate characteristics <sup>Note 2)</sup>		Maximum operating pressure differential (MPa) <sup>Note 4)</sup>	Max. system pressure (MPa) <sup>Note 4)</sup>	Weight (g) <sup>Note 3)</sup>
				Kv	Conversion Cv			
1	1/8, 1/4	2	VX213	0.20	0.23	1	1.0	300
		3		0.36	0.42	0.6		300

		10		1.89	2.21	0.1		580
	1/2	10		1.89	2.21	0.1		630

#### Normally Open (N.O.)

Size	Port size	Orifice diameter (mm) <sup>Note 1)</sup>	Model	Flow rate characteristics <sup>Note 2)</sup>		Maximum operating pressure differential (MPa) <sup>Note 4)</sup>	Max. system pressure (MPa) <sup>Note 4)</sup>	Weight (g) <sup>Note 3)</sup>
				Kv	Conversion Cv			
1	1/8, 1/4	2	VX243	0.20	0.23	0.9	1.0	320
		3		0.36	0.42	0.45		320
		5		0.54	0.63	0.2		320
2	1/4, 3/8	4	VX253	0.54	0.63	0.8		490
		7		0.93	1.08	0.15		490
		5		0.64	0.75	0.8		620
3	1/4, 3/8	8	VX263	1.36	1.58	0.3		620

Note 1) The orifice size is just as a reference guide. Check the flow rate characteristics (conversion Cv).

Note 2) The flow rate characteristics of this product have variations.

When the highly precise flow control is required according to the system to be used, select an orifice diameter 1.3 times larger than that shown above and install a restrictor on the downstream side of the solenoid valve to make the adjustment.

Note 3) Weight of grommet type. Add 10 g for conduit type, 30 g for DIN terminal type, 60 g for conduit terminal type respectively.

Note 4) Refer to "Glossary of Terms" on page 65 for details on the maximum operating pressure differential and the maximum system pressure.

### Fluid and Ambient Temperature

Fluid temperature (°C)	Ambient temperature (°C)
-5 <sup>Note)</sup> to 60	-20 to 60

Note) Kinematic viscosity: 50 mm<sup>2</sup>/s or less

### Valve Leakage Rate

#### Internal Leakage

Seal material	Leakage rate (Oil) <sup>Note)</sup>
FKM	0.1 cm <sup>3</sup> /min or less

#### External Leakage

Seal material	Leakage rate (Oil) <sup>Note)</sup>
FKM	0.1 cm <sup>3</sup> /min or less

Note) Leakage is the value at ambient temperature 20°C.

(Mounting Option/Special Electrical Entry Direction)

 Mounting Holes on the Bottom Side of the Body/  
Special Electrical Entry Direction

**VX2**     **XNB A**

Enter standard product number.

Mounting holes on the bottom side of the body/  
Special electrical entry direction

Symbol	Electrical entry direction	Symbol	Electrical entry direction
Nil	Standard 		
A	90° 	C	270° 
B	180° 		

(mm)					
Size	Port size	M	D	P	
1	1/8, 1/4	M4	6	12.8	
2	1/4, 3/8	M5	8	19	
3	1/2	M5	8	23	

Note) Resin body is not available.

\* Enter symbols in the order below when ordering a combination of electrical option, other option and mounting holes on the bottom side of the body.

Example) **VX2 1 2 A Z 1 A Z XNB A**

Electrical option  
Other option  
Mounting holes on the bottom side of the body/  
Special electrical entry direction

 Seal Material: EPDM/With Bracket/  
Mounting Holes on the Bottom Side of the Body/  
Special Electrical Entry Direction

**VX2**     **X332 A**

Enter standard product number. Seal material: EPDM

Fluid symbol	
0	Air
2	Water
4	Medium vacuum
5	Heated water (99°C or less)

With bracket/Mounting holes on the bottom side of the body/  
Special electrical entry direction

Specifications		
Symbol	Electrical entry direction	Bracket
Nil	IN side (Standard)	None
A	90°	
B	180°	
C	270°	
D	IN side (Standard)	With bracket*1, 2
E	90°	
F	180°	
G	270°	
H	IN side (Standard)	Mounting holes on the bottom side of the body*1
J	90°	
K	180°	
L	270°	

- \*1 Resin body is not available.
- \*2 The model with bracket is not available for port size 1/2.
- \*3 "Other Options", which can be combined, are A, B, D, E, Z.
- \*4 Electrical entry direction

\* Enter symbols in the order below when ordering a combination of electrical option, other option, seal material: EPDM, with bracket, mounting holes on the bottom side of the body and special electrical entry direction.

Example) **VX2 1 2 A Z 1 A Z X332 A**

Electrical option  
Other option  
Seal material: EPDM/  
With bracket/Mounting holes on the bottom side of the body/

	Z2T			
	Z3A			
	Z3B			
	Z3C			
	Z3D			
	Z3E			
	Z3F			
	Z3G			
	Z3H			
	Z3V			
	Z3J			

Note 1) Body  
material/Port  
size: Since "with  
bracket" setting  
is not provided  
on G, "XB"  
cannot be  
selected.

Note 2) Body  
material/Port  
size: Since the  
bracket is  
attached to H, J,  
K, L, M and N,  
"XB" cannot be  
selected.

Refer to pages 49 to 51 for electrical options, other options, and bracket/electrical entry direction.

### For Water

(Note) Body material/  
Port size: Since  
"with bracket"  
setting is not  
provided on G  
and P, "XB"  
cannot be  
selected.

Refer to pages 49 to 51 for electrical options, other options, and bracket/electrical entry direction.

# VX21/22/23 Series

## Construction/Single Unit

### Normally Closed (N.C.)

Body material: Aluminum, C37, Stainless steel

#### Component Parts

No.	Description	Material
1	Solenoid coil	Cu + Fe + Resin
2	Core	Fe
3	Tube	Stainless steel
4	Spring	Stainless steel
5	Armature assembly	NBR, FKM, Stainless steel, PPS
6	Seal	NBR, FKM
7	Body	Aluminum, C37, Stainless steel

Body material: Resin

#### Component Parts

No.	Description	Material
1	Solenoid coil	Cu + Fe + Resin
2	Core	Fe
3	Tube	Stainless steel
4	Spring	Stainless steel
5	Armature assembly	NBR, FKM, Stainless steel, PPS
6	Seal	NBR, FKM
7	Body	Resin (PBT)

### Normally Open (N.O.)

Body material: Aluminum, C37, Stainless steel

#### Component Parts

No.	Description	Material
1	Solenoid coil	Cu + Fe + Resin
2	Sleeve assembly	Stainless steel, Resin (PPS)
3	Push rod assembly	Resin (PPS), Stainless steel, NBR, FKM
4	Spring	Stainless steel
5	O-ring A	NBR, FKM
6	O-ring B	NBR, FKM
7	Adapter	Resin (PPS)
8	O-ring C	NBR, FKM
9	Body	Aluminum, C37, Stainless steel

Body material: Resin

#### Component Parts

No.	Description	Material
1	Solenoid coil	Cu + Fe + Resin
2	Sleeve assembly	Stainless steel, Resin (PPS)
3	Push rod assembly	Resin (PPS), Stainless steel, NBR, FKM
4	Spring	Stainless steel
5	O-ring A	NBR, FKM
6	O-ring B	NBR, FKM
7	Adapter	Resin (PPS)
8	O-ring C	NBR, FKM
9	Body	Resin (PBT)

## Construction/Manifold

### Normally Closed (N.C.)

Base material: Aluminum

#### Common SUP type (for air)

#### Individual SUP type (for medium vacuum)

### Component Parts

No.	Description	Material
1	Solenoid coil	Cu + Fe + Resin
2	Core	Fe
3	Tube	Stainless steel
4	Spring	Stainless steel
5	Armature assembly	NBR, FKM, Stainless steel, PPS
6	Seal	NBR, FKM
7	Body	Resin (PPS)
8	Gasket	NBR, FKM
9	Base	Aluminum

## Glossary of Terms

### Pressure Terminology

#### 1. Maximum operating pressure differential

The maximum pressure differential (the difference between the inlet and outlet pressure) which is allowed for operation. When the outlet pressure is 0 MPa, this becomes the maximum operating pressure.

#### 2. Minimum operating pressure differential

The minimum pressure differential (the difference between the inlet pressure and outlet pressure) required to keep the main valve fully open.

#### 3. Maximum system pressure

The maximum pressure that can be applied inside the pipelines (line pressure).

[The pressure differential of the solenoid valve portion must not exceed the maximum operating pressure differential.]

#### 4. Withstand pressure

The pressure in which the valve must be withstood without a drop in performance after holding for one minute under prescribed pressure and returning to the operating pressure range. [value under the prescribed conditions]

### Electrical Terminology

#### 1. Apparent power (VA)

Volt-ampere is the product of voltage (V) and current (A).

Power consumption (W): For AC,  $W = V \cdot A \cdot \cos \theta$ .

For DC,  $W = V \cdot A$ .

Note)  $\cos \theta$  shows power factor.  $\cos \theta = 0.9$

#### 2. Surge voltage

A high voltage which is momentarily generated by shutting off the power in the shut-off area.

#### 3. Degree of protection

A degree defined in the "JIS C 0920: Waterproof test of electric machinery/appliance and the degree of protection against the intrusion of solid foreign objects."

Verify the degree of protection for each product.

#### ●First Characteristics:

##### Degrees of protection against solid foreign objects

0	Non-protected
1	Protected against solid foreign objects of 50 mmφ and greater
2	Protected against solid foreign objects of 12 mmφ and greater
3	Protected against solid foreign objects of 2.5 mmφ and greater
4	Protected against solid foreign objects of 1.0 mmφ and greater
5	Dust-protected
6	Dust-tight

### Electrical Terminology

#### ●Second Characteristics:

##### Degrees of protection against water

0	Non-protected	—
1	Protected against vertically falling water drops	Dripproof type 1
2	Protected against vertically falling water drops when enclosure tilted up to 15°	Dripproof type 2
3	Protected against rainfall when enclosure tilted up to 60°	Rainproof type
4	Protected against splashing water	Splashproof type
5	Protected against water jets	Water-jet-proof type
6	Protected against powerful water jets	Powerful water-jet-proof type
7	Protected against the effects of temporary immersion in water	Immersible type
8	Protected against the effects of continuous immersion in water	Submersible type

#### Example) IP65: Dust-tight, Water-jet-proof type

"Water-jet-proof type" means that no water intrudes inside an equipment that could hinder from operating normally by means of applying water for 3 minutes in the prescribed manner. Take appropriate protection measures, since a device is not usable in an environment where a droplet of water is splashed constantly.

### Others

#### 1. Material

NBR: Nitrile rubber

FKM: Fluororubber

EPDM: Ethylene propylene rubber

#### 2. Oil-free treatment

The degreasing and washing of wetted parts

#### 3. Symbol

In the symbol  $\begin{matrix} \text{---} & \text{---} & \text{---} \\ \text{---} & \text{---} & \text{---} \end{matrix}$ , when the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

### Flat Terminal

#### Flat terminal/Electrical connection size of molded coil

# Solenoid Valve Flow Rate Characteristics

(How to indicate flow rate characteristics)

## 1. Indication of flow rate characteristics

The flow rate characteristics in equipment such as a solenoid valve, etc. are indicated in their specifications as shown in Table (1).

**Table (1) Indication of Flow Rate Characteristics**

Corresponding equipment	Indication by international standard	Other indications	Conformed standard
Pneumatic equipment	$C, b$	—	ISO 6358: 1989 JIS B 8390: 2000
	—	$S$	JIS B 8390: 2000 Equipment: JIS B 8379, 8381-1, 8381-2
		$C_v$	ANSI/(NFPA)T3.21.3 R1-2008
Process fluid control equipment	$K_v$	—	IEC60534-1: 2005 IEC60534-2-3: 1997 JIS B 2005-1: 2012
	—	$C_v$	JIS B 2005-2-3: 2004 Equipment: JIS B 8471, 8472, 8473

## 2. Pneumatic equipment

### 2.1 Indication according to the international standards

#### (1) Conformed standard

**ISO 6358: 1989 : Pneumatic fluid power—Components using compressible fluids—Determination of flow rate characteristics**

**JIS B 8390: 2000 : Pneumatic fluid power—Components using compressible fluids—How to test flow rate characteristics**

#### (2) Definition of flow rate characteristics

The flow rate characteristics are indicated as a result of a comparison between sonic conductance **C** and critical pressure ratio **b**.

Sonic conductance **C** : Value which divides the passing mass flow rate of an equipment in a choked flow condition by the product of the upstream absolute pressure and the density in a standard condition.

Critical pressure ratio **b** : Pressure ratio (downstream pressure/upstream pressure) which will turn to a choked flow when the value is smaller than this ratio.

Choked flow : The flow in which the upstream pressure is higher than the downstream pressure and where sonic speed in a certain part of an equipment is reached.  
Gaseous mass flow rate is in proportion to the upstream pressure and not dependent on the downstream pressure.

Subsonic flow : Flow greater than the critical pressure ratio

Standard condition : Air in a temperature state of 20°C, absolute pressure 0.1 MPa (= 100 kPa = 1 bar), relative humidity 65%.

It is stipulated by adding the “(ANR)” after the unit depicting air volume.  
(standard reference atmosphere)

Conformed standard: ISO 8778: 1990 Pneumatic fluid power—Standard reference atmosphere, JIS B 8393: 2000: Pneumatic fluid power—Standard reference atmosphere

#### (3) Formula for flow rate

It is described by the practical units as following.

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} \leq b, \text{ choked flow}$$

$$Q = 600 \times C (P_1 + 0.1) \sqrt{\frac{293}{273 + T}} \dots\dots\dots(1)$$

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} > b, \text{ subsonic flow}$$

$$Q = 600 \times C (P_1 + 0.1) \sqrt{1 - \left[ \frac{P_2 + 0.1}{P_1 + 0.1} - b \right]^2} \sqrt{\frac{293}{273 + T}} \dots\dots\dots(2)$$

**Q** : Air flow rate [L/min (ANR)]

**C** : Sonic conductance [ $\text{dm}^3/(\text{s}\cdot\text{bar})$ ],  $\text{dm}^3$  (Cubic decimeter) of SI = L (liter).

**b** : Critical pressure ratio [—]

**P<sub>1</sub>** : Upstream pressure [MPa]

**P<sub>2</sub>** : Downstream pressure [MPa]

**T** : Temperature [ $^{\circ}\text{C}$ ]

Note) Formula of subsonic flow is the elliptic analogous curve.

Flow rate characteristics are shown in Graph (1) For details, please use the calculation software available from SMC website.

Example)

Obtain the air flow rate for **P<sub>1</sub>** = 0.4 [MPa], **P<sub>2</sub>** = 0.3 [MPa], **T** = 20 [ $^{\circ}\text{C}$ ] when a solenoid valve is performed in **C** = 2 [ $\text{dm}^3/(\text{s}\cdot\text{bar})$ ] and **b** = 0.3.

According to formula 1, the maximum flow rate =  $600 \times 2 \times (0.4 + 0.1) \times \sqrt{\frac{293}{273 + 20}} = 600$  [L/min (ANR)]

$$\text{Pressure ratio} = \frac{0.3 + 0.1}{0.4 + 0.1} = 0.8$$

Based on Graph (1), it is going to be 0.7 if it is read by the pressure ratio as 0.8 and the flow ratio to be **b** = 0.3. Hence, flow rate = Max. flow x flow ratio =  $600 \times 0.7 = 420$  [L/min (ANR)]

**Graph (1) Flow rate characteristics**

#### (4) Test method

Attach a test equipment with the test circuit shown in Fig. (1) while maintaining the upstream pressure to a certain level which does not go below 0.3 MPa. Next, measure the maximum flow to be saturated in the first place, then measure this flow rate at 80%, 60%, 40%, 20% and the upstream and downstream pressure. And then, obtain the sonic conductance **C** from this maximum flow rate. In addition, calculate **b** using each data of others and the subsonic flow formula, and then obtain the critical pressure ratio **b** from that average.

**Fig. (1) Test circuit based on ISO 6358: 1989, JIS B 8390: 2000**

## 2.2 Effective area **S**

### (1) Conformed standard

**JIS B 8390: 2000: Pneumatic fluid power—Components using compressible fluids—Determination of flow rate characteristics**

**Equipment standards: JIS B 8373: Solenoid valve for pneumatics**

JIS B 8379: Silencer for pneumatics

JIS B 8381-1: Fittings for pneumatics—Part 1: Push-in fittings for thermoplastic resin tubing

JIS B 8381-2: Fittings for pneumatics—Part 2: Compression fittings for thermoplastic resin tubing

### (2) Definition of flow rate characteristics

Effective area **S**: The cross-sectional area having an ideal throttle without friction deduced from the calculation of the pressure changes inside an air tank or without reduced flow when discharging the compressed air in a choked flow, from an equipment attached to the air tank. This is the same concept representing the “easy to run through” as sonic conductance **C**.

### (3) Formula for flow rate

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} \leq 0.5, \text{ choked flow}$$

$$Q = 120 \times S (P_1 + 0.1) \sqrt{\frac{293}{273 + T}} \dots\dots\dots(3)$$

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} > 0.5, \text{ subsonic flow}$$

$$Q = 240 \times S \sqrt{(P_2 + 0.1) (P_1 - P_2)} \sqrt{\frac{293}{273 + T}} \dots\dots\dots(4)$$

Conversion with sonic conductance **C**:

$$S = 5.0 \times C \dots\dots\dots(5)$$

**Q** : Air flow rate[L/min(ANR)]

**S** : Effective area [mm<sup>2</sup>]

**P<sub>1</sub>** : Upstream pressure [MPa]

**P<sub>2</sub>** : Downstream pressure [MPa]

**T** : Temperature [°C]

Note) Formula for subsonic flow (4) is only applicable when the critical pressure ratio **b** is the unknown equipment. In the formula (2) by the sonic conductance **C**, it is the same formula as when **b** = 0.5.

### (4) Test method

Attach a test equipment with the test circuit shown in Fig. (2) in order to discharge air into the atmosphere until the pressure inside the air tank goes down to 0.25 MPa (0.2 MPa) from an air tank filled with the compressed air at a certain pressure level (0.5 MPa) which does not go below 0.6 MPa. At this time, measure the discharging time and the residual pressure inside the air tank which had been left until it turned to be the normal values to determine the effective area **S**, using the following formula. The volume of an air tank should be selected within the specified range by corresponding to the effective area of an equipment for test. In the case of JIS B 8379, the pressure values are in parentheses and the coefficient of the formula is 12.9.

$$S = 12.1 \frac{V}{t} \log_{10} \left( \frac{P_s + 0.1}{P + 0.1} \right) \sqrt{\frac{293}{T}} \dots\dots\dots(6)$$

**S** : Effective area [mm<sup>2</sup>]

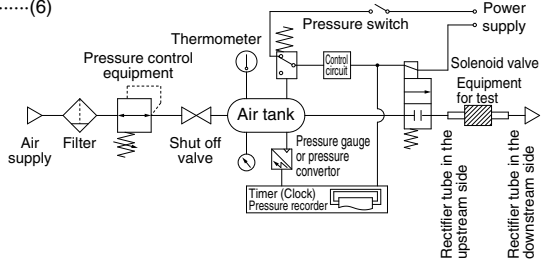

**V** : Air tank capacity [L]

**t** : Discharging time [s]

**P<sub>s</sub>**: Pressure inside air tank before discharging [MPa]

**P** : Residual pressure inside air tank after discharging [MPa]

**T** : Temperature inside air tank before discharging [K]

**Fig. (2) Test circuit based on JIS B 8390: 2000**

### 2.3 Flow coefficient **Cv** factor

The United States Standard ANSI/(NFPA)T3.21.3: R1-2008R: Pneumatic fluid power—Flow rating test procedure and reporting method for fixed orifice components

This standard defines the **Cv** factor of the flow coefficient by the following formula that is based on the test conducted by the test circuit analogous to ISO 6358.

$$Cv = \frac{Q}{114.5 \sqrt{\frac{\Delta P (P_2 + P_a)}{T_1}}} \dots\dots\dots(7)$$

$\Delta P$  : Pressure drop between the static pressure tapping ports [bar]

$P_1$  : Pressure of the upstream tapping port [bar gauge]

$P_2$  : Pressure of the downstream tapping port [bar gauge]:  $P_2 = P_1 - \Delta P$

$Q$  : Flow rate [L/s standard condition]

$P_a$  : Atmospheric pressure [bar absolute]

$T_1$  : Upstream absolute temperature [K]

Test conditions are  $P_1 + P_a = 6.5 \pm 0.2$  bar absolute,  $T_1 = 297 \pm 5K$ ,  $0.07 \text{ bar} \leq \Delta P \leq 0.14$  bar.

This is the same concept as effective area **A** which ISO 6358 stipulates as being applicable only when the pressure drop is smaller than the upstream pressure and the compression of air does not become a problem.

### 3. Process fluid control equipment

#### (1) Conformed standard

IEC60534-1: 2005: Industrial-process control valves. Part 1: control valve terminology and general considerations

IEC60534-2-3: 1997: Industrial-process control valves. Part 2: Flow capacity, Section Three-Test procedures

JIS B 2005-1: 2012: Industrial-process control valves – Part 1: Control valve terminology and general considerations

JIS B 2005-2-3: 2004: Industrial-process control valves – Part 2: Flow capacity – Section 3: Test procedures

Equipment standards: JIS B 8471: Solenoid valve for water

JIS B 8472: Solenoid valve for steam

JIS B 8473: Solenoid valve for fuel oil

#### (2) Definition of flow rate characteristics

**Kv** factor: Value of the clean water flow rate represented by m<sup>3</sup>/h that runs through the valve (equipment for test) at 5 to 40°C, when the pressure difference is 1 x 10<sup>5</sup> Pa (1 bar). It is calculated using the following formula:

$$Kv = Q \sqrt{\frac{1 \times 10^5}{\Delta P} \cdot \frac{\rho}{1000}} \dots\dots\dots(8)$$

**Kv**: Flow coefficient [m<sup>3</sup>/h]

$Q$  : Flow rate [m<sup>3</sup>/h]

$\Delta P$  : Pressure difference [Pa]

$\rho$  : Density of fluid [kg/m<sup>3</sup>]

#### (3) Formula of flow rate

It is described by the practical units. Also, the flow rate characteristics are shown in Graph (2).

In the case of liquid:

$$Q = 53 Kv \sqrt{\frac{\Delta P}{G}} \dots\dots\dots(9)$$

$Q$  : Flow rate [L/min]

**Kv**: Flow coefficient [m<sup>3</sup>/h]

$\Delta P$  : Pressure difference [MPa]

$G$  : Relative density [water = 1]

In the case of saturated aqueous vapor:

$$Q = 232 Kv \sqrt{\Delta P (P_2 + 0.1)} \dots\dots\dots(10)$$

$Q$  : Flow rate [kg/h]

**Kv**: Flow coefficient [m<sup>3</sup>/h]

$\Delta P$  : Pressure difference [MPa]

$P_1$  : Upstream pressure [MPa]:  $\Delta P = P_1 - P_2$

$P_2$  : Downstream pressure [MPa]

<b>VX2</b>
<b>VXK</b>
<b>VXD</b>
<b>VXZ</b>
<b>VXS</b>
<b>VXB</b>
<b>VXE</b>
<b>VXP</b>
<b>VXR</b>
<b>VXH</b>
<b>VXF</b>
<b>VX3</b>
<b>VXA</b>

Conversion of flow coefficient:

$K_v = 0.865 C_v$  .....(11)

Here,

**Cv** factor: Value of the clean water flow rate represented by US gal/min that runs through the valve at 40 to 100°F, when the pressure difference is 1 lbf/in<sup>2</sup> (psi)

Value is different from **Kv** and **Cv** factors for pneumatic purpose due to different test method.

(4) Test method

Connect the equipment for the test to the test circuit shown in Fig. (3), and run water at 5 to 40°C. Then, measure the flow rate with a pressure difference where vaporization does not occur in a turbulent flow (pressure difference of 0.035 MPa to 0.075 MPa when the inlet pressure is within 0.15 MPa to 0.6 MPa). However, as the turbulent flow is definitely caused, the pressure difference needs to be set with a large enough difference so that the Reynolds number does not fall below 1 x 10<sup>5</sup>, and the inlet pressure needs to be set slightly higher to prevent vaporization of the liquid. Substitute the measurement results in formula (8) to calculate **Kv**.

Fig. (3) Test circuit based on IEC60534-2-3, JIS B 2005-2-3

Graph (2) Flow rate characteristics

Example 1)

Obtain the pressure difference when water [15 L/min] runs through the solenoid valve with a **Kv** = 1.5 m<sup>3</sup>/h. As the flow rate when **Kv** = 1 is calculated as the formula:  $Q_0 = 15 \times 1/1.5 = 10$  [L/min], read off  $\Delta P$  when  $Q_0$  is 10 [L/min] in Graph (2). The reading is 0.036 [MPa].

Example 2)

Obtain the saturated steam flow rate when  $P_i = 0.8$  [MPa] and  $\Delta P = 0.008$  [MPa] with a solenoid valve with a **Kv** = 0.05 [m<sup>3</sup>/h]. Read off  $Q_0$  when  $P_i$  is 0.8 and  $\Delta P$  is 0.008 in Graph (2), the reading is 20 kg/h. Therefore, the flow rate is calculated as the formula:  $Q = 0.05/1 \times 20 = 1$  [kg/h].

## VX21/22/23 Series

# Flow Rate Characteristics 1

Note) Use this graph as a guide. In the case of obtaining an accurate flow rate, refer to pages 66 through to 70.

### For Air

### How to read the graph

The sonic range pressure to generate a flow rate of 400 L/min (ANR) is  $P_1 = 0.2$  MPa for a ø4 orifice and  $P_1 = 0.58$  MPa for a ø3 orifice.

### For Water

### How to read the graph

When a water flow of 2 L/min is generated,  $\Delta P = 0.013$  MPa for a valve with ø3 orifice.

## Flow Rate Characteristics 2

Note) Use this graph as a guide. In the case of obtaining an accurate flow rate, refer to pages 66 through to 70.

### For Saturated Steam

### How to read the graph

The sonic range pressure to generate a flow rate of 15 kg/h is  $P_1 \approx 0.55$  MPa for a  $\phi 2$  orifice and  $P_1 \approx 0.28$  MPa for a  $\phi 3$  orifice.

# VX21/22/23 Series Specific Product Precautions 1

Be sure to read this before handling the products.  
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

## Design

### ⚠ Warning

- Cannot be used as an emergency shutoff valve etc.**  
The valves presented in this catalog are not designed for safety applications such as an emergency shutoff valve. If the valves are used in this type of system, other reliable safety assurance measures should also be adopted.
- Extended periods of continuous energization**  
The solenoid coil will generate heat when continuously energized. Avoid using in a tightly shut container. Install it in a well ventilated area. Furthermore, do not touch it while it is being energized or right after it is energized.
- Liquid rings**  
In cases with a flowing liquid, provide a bypass valve in the system to prevent the liquid from entering the liquid seal circuit.
- Actuator drive**  
When an actuator, such as a cylinder, is to be driven using a valve, take appropriate measures to prevent potential danger caused by actuator operation.
- Pressure (including vacuum) holding**  
It is not usable for an application such as holding the pressure (including vacuum) inside of a pressure vessel because air leakage is entailed in a valve.
- When the conduit type is used as equivalent to an IP65 enclosure, install a wiring conduit etc.**
- When an impact, such as water hammer etc., caused by the rapid pressure fluctuation is applied, the solenoid valve may be damaged. Give an attention to it.**

## Selection

### ⚠ Warning

- Fluid**
  - Type of fluid**  
Before using a fluid, check whether it is compatible with the materials of each model by referring to the fluids listed in this catalog. Use a fluid with a kinematic viscosity of 50 mm<sup>2</sup>/s or less. If there is something you do not know, please contact SMC.
  - Flammable oil, Gas**  
Do not use the product with combustion-supporting or flammable fluids.
  - Corrosive gas**  
Cannot be used since it will lead to cracks by stress corrosion or result in other incidents.
  - When a brass body is used, then depending on water quality, corrosion and internal leakage may occur. If such abnormalities occur, exchange the product for a stainless steel body.
  - Use an oil-free specification when any oily particle must not enter the passage.
  - Applicable fluid on the list may not be used depending on the operating condition. Give adequate confirmation, and then determine a model, just because the compatibility list shows the general case.

## Selection

### ⚠ Warning

- Fluid quality**

<Air>

  - Use clean air.**  
Do not use compressed air that contains chemicals, synthetic oils including organic solvents, salt or corrosive gases, etc., as it can cause damage or malfunction.
  - Install an air filter.**  
Install air filters close to the valves on the upstream side. A filtration degree of 5 μm or less should be selected.
  - Install an aftercooler or air dryer, etc.**  
Compressed air that contains excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an aftercooler or air dryer, etc.
  - If excessive carbon powder is generated, eliminate it by installing mist separators at the upstream side of valves.**  
If excessive carbon powder is generated by the compressor, it may adhere to the inside of the valves and cause a malfunction.

Refer to Best Pneumatics No.5 for further details on compressed air quality.

### <Vacuum>

Please be aware that there is a range of pressure that can be used.

Vacuum piping direction: if the system uses a vacuum pump, we ask that you install the vacuum pump on the secondary side.

Also, install a filter on the primary side, and be careful that no foreign object is picked up.

Please replace the valve after operating the device approximately 300,000 times.

# VX21/22/23 Series

## Specific Product Precautions 2

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

### Selection

## ⚠ Warning

### <Water>

The use of a fluid that contains foreign objects can cause problems such as malfunction and seal failure by promoting wear of the valve seat and armature and by sticking to the sliding parts of the armature etc. Install a suitable filter (strainer) immediately upstream from the valve. As a general rule, use 100 mesh.

The supply water includes materials that create a hard sediment or sludge such as calcium and magnesium. Since this scale and sludge can cause the valve to malfunction, install water softening equipment, and a filter (strainer) directly upstream from the valve to remove these substances.

### Tap water pressure:

The water pressure for tap water is normally 0.4 MPa or less. However, in places like a high-rise building, the pressure may be 1.0 MPa.

When selecting tap water, be careful of the maximum operating pressure differential.

When using water or heated water, poor operation or leaks may be caused by dezincification, erosion, corrosion, etc. The brass (C37) body of this product uses dezincification resistant material as a standard. We also offer a stainless steel body type with improved corrosion resistance. Please use the one that fits your needs.

### <Oil>

Generally, FKM is used as seal material, as it is resistant to oil. The resistance of the seal material may deteriorate depending on the type of oil, manufacturer or additives. Check the resistance before using. The kinematic viscosity must not exceed 50 mm<sup>2</sup>/s.

### <Steam>

The use of a steam that contains foreign objects can cause problems such as malfunction and seal failure by promoting wear of the valve seat and armature, and by sticking to the sliding parts of the armature etc. Install a suitable filter (strainer) immediately upstream from the valve.

As a standard, the mesh count for the strainer is 100 mesh. However, the size and shape of foreign objects that occur depends on the operating environment. Check the fluid status and choose an appropriate mesh count.

The supply water to a boiler includes materials that create a hard sediment or sludge such as calcium and magnesium.

Sediment and sludge from steam can cause the valve to not operate properly. Install a water softening device, which removes these materials. Do not use operation steam which contains chemicals, synthetic oils containing organic solvents, salts or corrosive gases, etc., as these can cause damage or deterioration.

The seal material (special FKM) used for wetted parts of the product can withstand steam in standard conditions.

However, the resistance of the sealing material can deteriorate depending on the types of additives such as boiler compounds and water conditioners within the boiler steam. Please only utilize the product after determining the sealing material resistance within the actual usage conditions.

### 3. Ambient environment

Use within the operable ambient temperature range. Check the compatibility between the product's composition materials and the ambient atmosphere. Be certain that the fluid used does not touch the external surface of the product.

### 4. Countermeasures against static electricity

Take measures to prevent static electricity since some fluids can cause static electricity.

### Selection

## ⚠ Warning

### 5. Low temperature operation

- 1) The valve can be used in an ambient temperature of between -20 to -10°C. However, take measures to prevent freezing or solidification of impurities, etc.
- 2) When using valves for water application in cold climates, take appropriate countermeasures to prevent the water from freezing in tubing after cutting the water supply from the pump, by draining the water etc. When warming by a heater etc., be careful not to expose the coil portion to a heater. Installation of a dryer, heat retaining of the body is recommended to prevent a freezing condition in which the dew point temperature is high and the ambient temperature is low, and the high flow runs.

## ⚠ Caution

### 1. Leakage voltage

When the solenoid valve is operated using the controller, etc., the leakage voltage should be the product allowable leakage voltage or less. Particularly when using a resistor in parallel with a switching element and using a C-R element (surge voltage suppressor) to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.

AC coil: 5% or less of rated voltage  
DC coil: 2% or less of rated voltage

### 2. Selecting model

Material depends on fluid. Select optimal models for the fluid.

### 3. When the fluid is oil.

The kinematic viscosity must not exceed 50 mm<sup>2</sup>/s.

### Mounting

## ⚠ Warning

### 1. If air leakage increases or equipment does not operate properly, stop operation.

After mounting is completed, confirm that it has been done correctly by performing a suitable function test.

### 2. Do not apply external force to the coil section.

When tightening is performed, apply a wrench or other tool to the outside of the piping connection parts.

### 3. Mount a valve with its coil position upward, not downward.

When mounting a valve with its coil positioned downward, foreign objects in the fluid will adhere to the iron core leading to a malfunction. Especially for strict leakage control, such as with vacuum applications and non-leak specifications, the coil must be positioned upward.

### 4. Do not warm the coil assembly with a heat insulator etc.

Use tape, heaters, etc., for freeze prevention on the piping and body only. They can cause the coil to burn out.

# VX21/22/23 Series Specific Product Precautions 3

Be sure to read this before handling the products.  
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

## Mounting

### Warning

- Secure with brackets, except in the case of steel piping and copper fittings.
- Avoid sources of vibration, or adjust the arm from the body to the minimum length so that resonance will not occur.
- Painting and coating

Warnings or specifications printed or labeled on the product should not be erased, removed or covered up.

## Disassembly/Assembly Procedures

### Caution

- Before starting the disassembly work, be sure to shut off the power supply and pressure supply, and then release the residual pressure.

#### Disassembly

##### <N.C.>

- Loosen the mounting screws.  
The coil assembly, seal, return spring, armature assembly and body can be removed.

##### <N.O.>

- Loosen the mounting screws.  
The coil assembly, push rod assembly, O-rings, adapter and body can be removed.

#### Assembly

##### <Common to N.C. and N.O.>

- Mount the components on the body in the reverse order of disassembly.
- When changing the electrical entry direction, turn the coil assembly in a desired direction to mount it.
- Push the coil assembly against the body and tighten the screws two or more rounds diagonally (Fig. 2) in the status that there are no gaps between the coil assembly and body (Fig. 1).  
Tighten the screws in the order of "1→2→3→4→1→2→3→4".

#### Proper Tightening Torque (N.m)

VX21	0.5
VX22	
VX23	0.7

Fig.1

Fig.2

\* After tightening the screws, make sure that there are no gaps between the coil and body (Fig. 1).

\* After the disassembly and assembly have been completed, make sure that no leak occurs from the seal. Additionally, when restarting the valve, make sure that the valve operates correctly after checking the safety.

Be sure to read this before handling the products.  
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

## Disassembly/Assembly Procedures

### ⚠ Caution

#### Manifold Exploded View

\* Mounting orientation exists when mounting valves onto manifold base. Mount it as shown above.

\* Take great care when special electrical entry direction (XC) is used.

## Piping

### ⚠ Warning

1. During use, deterioration of the tube or damage to the fittings could cause tubes to come loose from their fittings and thrash about.

To prevent uncontrolled tube movement, install protective covers or fasten tubes securely in place.

2. For piping the tube, fix the product securely using the mounting holes so that the product is not in the air.

### ⚠ Caution

1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe. Avoid pulling, compressing, or bending the valve body when piping.

2. Avoid connecting ground lines to piping, as this may cause electric corrosion of the system.

3. Always tighten threads with the proper tightening torque.

When using steel piping, tighten with the proper tightening torque shown below.

Lower tightening torque will lead into fluid leakage.

#### Tightening Torque for Piping

Thread size	Proper tightening torque (N·m)
Rc1/8	7 to 9
Rc1/4	12 to 14
Rc3/8	22 to 24
Rc1/2	28 to 30

4. Connection of piping to products

When connecting piping to a product, avoid mistakes regarding the supply port etc.

5. Winding of sealant tape

When connecting pipes, fittings, etc., be sure that chips from the pipe threads and sealing material do not enter the valve.

Furthermore, when sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

6. In applications such as vacuum and non-leak specifications, use caution specifically against the contamination of foreign objects or airtightness of the fittings.

# VX21/22/23 Series

## Specific Product Precautions 5

Be sure to read this before handling the products.  
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

### Recommended Piping Conditions

- When connecting tubes using One-touch fittings, provide some spare tube length shown in Fig. 1, recommended piping configuration.

Also, do not apply external force to the fittings when binding tubes with bands etc. (see Fig. 2.)

Fig. 1 Recommended piping configuration

Unit: mm

Tube size	Mounting pitch A			Straight portion length
	Nylon tubing	Soft nylon tubing	Polyurethane tubing	
ø1/8"	44 or more	29 or more	25 or more	16 or more
ø6	84 or more	39 or more	39 or more	30 or more
ø1/4"	89 or more	56 or more	57 or more	32 or more
ø8	112 or more	58 or more	52 or more	40 or more
ø10	140 or more	70 or more	69 or more	50 or more
ø12	168 or more	82 or more	88 or more	60 or more

Recommended

Unacceptable

Fig. 2 Binding tubes with bands

### Wiring

#### Warning

- Do not apply AC voltage to Class "H" coil AC type unless it is built in full-wave rectifier, or the coil will be damaged.

#### Caution

- As a rule, use electrical wire with a cross sectional area of 0.5 to 1.25 mm<sup>2</sup> for wiring. Furthermore, do not allow excessive force to be applied to the lines.
- Use electrical circuits which do not generate chattering in their contacts.
- Use voltage which is within  $\pm 10\%$  of the rated voltage. In cases with a DC power supply where importance is placed on responsiveness, stay within  $\pm 5\%$  of the rated value. The voltage drop is the value in the lead wire section connecting the coil.
- When a surge from the solenoid affects the electrical circuitry, install a surge voltage suppressor etc., in parallel with the solenoid. Or, adopt an option that comes with the surge voltage protection circuit. (However, a surge voltage occurs even if the surge voltage protection circuit is used. For details, please consult with SMC.)

# VX21/22/23 Series Specific Product Precautions 6

Be sure to read this before handling the products.  
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

## Operating Environment

### Warning

1. Do not use in an atmosphere having corrosive gases, chemicals, sea water, water, water steam, or where there is direct contact with any of these.
2. Do not use in explosive atmospheres.
3. Do not use in locations subject to vibration or impact.
4. Do not use in locations where radiated heat will be received from nearby heat sources.
5. Employ suitable protective measures in locations where there is contact with water droplets, oil or welding spatter, etc.

## Maintenance

### Warning

#### 1. Removing the product

The valve will reach a high temperature when used with high temperature fluids. Confirm that the valve temperature has dropped sufficiently before performing work. If touched inadvertently, there is a danger of being burned.

- 1) Shut off the fluid supply and release the fluid pressure in the system.
- 2) Shut off the power supply.
- 3) Dismount the product.

#### 2. Low frequency operation

Switch valves at least once every 30 days to prevent malfunction. Also, in order to use it under the optimum state, conduct a regular inspection once a half year.

### Caution

#### 1. Filters and strainers

- 1) Be careful regarding clogging of filters and strainers.
- 2) Replace filter elements after one year of use, or earlier if the pressure drop reaches 0.1 MPa.
- 3) Clean strainers when the pressure drop reaches 0.1 MPa.

#### 2. Lubrication

When using after lubricating, never forget to lubricate continuously.

#### 3. Storage

In case of long term storage after use, thoroughly remove all moisture to prevent rust and deterioration of rubber materials etc.

#### 4. Exhaust the drainage from an air filter periodically.

## Operating Precautions

### Warning

1. If there is a possibility of reverse pressure being applied to the valve, take countermeasures such as mounting a check valve on the downstream side of the valve.
2. When problems are caused by a water hammer, install water hammer relief equipment (accumulator etc.), or use an SMC water hammer relief valve (VXR series). For details, please consult with SMC.

## Electrical Connections

### Caution

#### ■ Grommet

Class B coil: AWG20 Insulator O.D. 2.6 mm

Class H coil: AWG18 Insulator O.D. 2.1 mm

Rated voltage	Lead wire color	
	①	②
DC	Black	Red
100 VAC	Blue	Blue
200 VAC	Red	Red
Other AC	Gray	Gray

\* There is no polarity.

#### ■ DIN terminal

##### Disassembly

1. After loosening the binding head screw with flange, then if the housing is pulled in the direction of the arrow, the connector will be removed from the solenoid valve.
2. Pull out the binding head screw with flange from the housing.
3. There is a cutout on the bottom of the terminal block. Insert a small flat head screwdriver, etc. into this cutout, and remove the terminal block from the housing. (See figure below.)
4. Remove the ground nut, and pull out the washer and the rubber seal.

##### Wiring

1. Pass the cable through the ground nut, washer and rubber seal in this order, and insert these parts into the housing.
2. Loosen the binding head screw of the terminal block, then insert the core wire or the crimped terminal of the lead wire into the terminal, and securely fix it with the binding head screw. The binding head screw of the terminal block is M3.  
Note 1) Tighten the screw to a torque of between 0.5 and 0.6 N·m.  
Note 2) Cable O.D.:  $\phi 6$  to  $\phi 12$  mm  
Note 3) For an outside cable diameter of  $\phi 9$  to 12 mm, remove the internal parts of the rubber seal before using.

##### Assembly

1. Pass the cable through the ground nut, washer, rubber seal and the housing in this order, and connect to the terminal block. Then, set the terminal block inside the housing. (Push in the terminal block until it snaps into position.)
2. Insert the rubber seal and the washer in this order into the cable entry of the housing, and then tighten the ground nut securely.
3. Insert the gasket between the bottom part of the terminal block and the plug attached to the equipment, and then insert the binding head screw with flange from the top of the housing, and tighten it.  
Note 1) Tighten the screw to a torque of between 0.5 and 0.6 N·m.  
Note 2) The orientation of the connector can be changed in steps of 90° by changing the method of assembling the housing and the terminal block.

# VX21/22/23 Series

## Specific Product Precautions 7

Be sure to read this before handling the products.  
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

### Electrical Connections

#### ⚠ Caution

Internal connections are as shown below. Make connections to the power supply accordingly.

Terminal no.	1	2
DIN terminal	+(-)	-(+)

\* There is no polarity.

#### ■ Conduit terminal

##### Disassembly

1. Loosen the mounting screw, and remove the terminal cover from the conduit terminal.

##### Wiring

1. Insert the cable into the conduit terminal.
2. Loosen the screw with UP terminal of the conduit terminal, then insert the core wire or the crimped terminal of the lead wire into the terminal, and securely fix it with the screw with UP terminal.  
Note 1) Tighten the screw to a torque of between 0.5 and 0.6 N·m.

##### Assembly

1. Insert the gasket into the conduit terminal, and then clamp the terminal cover with the mounting screw.  
Note 1) Tighten the screw to a torque of between 0.5 and 0.6 N·m.  
Note 2) When changing the orientation of the conduit terminal, carry out the following procedure.
1. Apply a tool (monkey wrench, spanner, etc.) to the width across flats of the conduit terminal, and turn the terminal in the counterclockwise direction.
2. Loosen the lock nut.
3. Turn the conduit terminal in the clamping direction (clockwise direction) to about 15° ahead of the desired position.
4. Turn the lock nut by hand to the coil side until it is lightly tightened.
5. Apply a tool to the width across flats of the conduit terminal, and turn it to the desired position (through an angle of about 15°) so as to clamp the conduit terminal.

Note) When changing the orientation by applying additional tightening force to the conduit terminal from the factory-set position, turn no more than one half a turn.

#### ⚠ Caution

##### ■ Conduit terminal

Make connections according to the marks shown below.

- Use the tightening torques below for each section.
- Properly seal the terminal connection (G1/2) with the special wiring conduit etc.

##### View A-A

(Internal connection diagram)

##### ■ Conduit

When used as an IP65 equivalent, use seal to install the wiring conduit. Also, use the tightening torque below for the conduit.

Class B coil: AWG20 Insulator O.D. 2.5 mm

Class H coil: AWG18 Insulator O.D. 2.1 mm

Rated voltage	Lead wire color	
	①	②
DC	Black	Red
100 VAC	Blue	Blue
200 VAC	Red	Red
Other AC	Gray	Gray

\* There is no polarity.

Description	Part no.
Seal	VCW20-15-6

Note) Please order separately.
