

ASR *Series*

AC Servo Motor Driven Pumps

Hydraulic Fluids

Hydraulic Fluids

Use clean petroleum base oils equivalent to ISO VG32 or 46. The recommended viscosity range is from 20 to 400 mm²/s and temperature range is from 0 to 60 °C , both of which have to be satisfied for the use of the above hydraulic oils.

Control of Contamination

Due caution must be paid to maintaining control over contamination of the operating oil which can otherwise lead to breakdowns and shorten the life of the unit. Please maintain the degree of contamination within NAS class 9.

The suction port must be equipped with at least 100 μm (150 mesh) reservoir type filter and the return line must have a line type filter of under 10 μm.

Instructions

Transportation

For transportation, use the lifting rings on the pump. Do not use lifting cables at places other than the lifting rings.

Mounting

When installing the pump, the filling port should be positioned upwards.

Suction Pressure

Permissible suction pressure at the inlet port of the pump is between -16.7 and +50 kPa. For piping to the suction port, use pipes of the nominal diameters shown below. Make sure that the height of the pump suction port is lower than the oil level in the reservoir.

Model	Nominal Dia.
ASR 1 / ASR 2	3/4
ASR 3 / ASR 5	1 1/4
ASR10	2

Hints on Piping

When using steel pipes for the suction or discharge ports, excessive load from the piping to the pump generates excessive noise. Whenever there is fear of excessive load, please use rubber hoses.

Drain Piping

Install drain piping according to the chart and ensure that pressure within the pump housing should be maintained at a nominal pressure of less than 0.1 MPa and surge pressure of less than 0.5 MPa.

The length of piping should be less than 1 m. Instead of joining the drain pipe to other return lines, run it independently. The pipe end should be submerged in oil.

[Recommended Drain Piping Size]

Model	Fitting Size	Inside Dia. of Pipe
ASR 1 / ASR 2	3/8 (Inside Dia. 8.5 mm or more)	10 mm or more
ASR 3	1/2 (Inside Dia. 12 mm or more)	12 mm or more
ASR 5 / ASR10	3/4 (Inside Dia. 16 mm or more)	19 mm or more

Starting

Before first starting, fill the pump case with clean operating oil via the filling port. In order to avoid air blockage when first starting, adjust the control valves so that the discharged oil from the pump is returned directly to the reservoir or the actuator moves in a free load.

Bleeding Air

It may be necessary to bleed air from the pump case and lines to remove causes of vibration. An air bleed valve (Model Number: ST1004-*10*, Page21) in the outlet line is recommended.

For air bleeding with an air bleed valve installed, run the pump at a rotational speed that provides a flow rate equal to/higher than the valve's flow rate to reseating.

Setting Safety Valve (Pressure) and Delivery

At the time of shipment, the unit has been preset to the delivery rate shown below; the safety valve has been set to 21 MPa (19.5 MPa for ASR2). Adjust the preset delivery and safety valve (pressure) to meet your system requirements.

[Default Setting of Delivery]

Model Numbers	Single Displacement Type "X" cm ³ /rev	Dual Displacement Type "W" cm ³ /rev	
		Large Displacement	Small Displacement
ASR 1	15.8	15.8	8
ASR 2	22.2	22.2	8
ASR 3	36.9	36.9	10
ASR 5	56.2	56.2	14
ASR10	100	100	20

Adjustment of Safety Valve (Pressure)

• Single Displacement Type

Turning the pressure adjustment screw clockwise increases pressure.

See the chart for the pressure change per turn of the adjustment screw. After adjustment, be sure to tighten the lock nut.

Model Numbers	Pressure Change Per Turn MPa	Max. Setting Value MPa	Min. Setting Value MPa
ASR1/ASR3/ASR5-※※-HX	4.4	24.8	8
ASR10-※※-HX			2
ASR2-※C-CX		19.5	2

★ For the relationship between the pressure adjustment screw position and pressure adjustment, see page 6.

• Dual Displacement Type

The dual displacement type does not support the full cut-off function. Provide a safety valve on the pump discharge side.

Set the safety valve at a value of the maximum operating pressure + 3 to 3.5 MPa.

Precautions During Operation

During and for a period after operation, the surface temperature of the AC servo motor and the pump will be hot. Prevent hands and other body parts from coming into contact with them.

Interchangeability in Installation between Current and New Designs

The models shown below have been changed in design.

Name	Model Numbers	Design Number		Interchangeability in Installation	Major Changes
		Current	New		
ASR Series AC Servo Motor Driven Pumps	ASR2-※C-C※※※※-※00 ASR10-※※-H※※※※-※00	11	12	Yes	● Improvement of reliability

[Volume of Pre-fill Oil Required]

Model	Volume cm ³
ASR 1/ASR 2	600
ASR 3/ASR 5	1200
ASR 10	2500

Adjustment of Delivery

Turning the flow adjustment screw for the single displacement type or the large displacement side flow adjustment screw for the dual displacement type clockwise decreases delivery. Turning the small displacement side flow adjustment screw for the dual displacement type clockwise increases delivery.

[Volume adjusted by each full turn of the flow adjustment screw]

Model Numbers	Single Displacement Type "X" cm ³ /rev	Dual Displacement Type "W" cm ³ /rev	
		Large Displacement	Small Displacement
ASR 1	1.4	1.4	1.5
ASR 2	2.0	2.0	2.1
ASR 3	2.9	2.9	2.8
ASR 5	3.9	3.9	3.7
ASR10	5.4	5.4	7.9

★ For the relationship between the flow adjustment screw position and flow adjustment, see pages 6 and 7.

Providing flexible flow/pressure control !

ASR Series AC Servo Motor Driven Pumps

The ASR series provides variable flow by driving a piston pump directly with an AC servo motor and controlling the rotational speed in a range from zero to the maximum level. This series allows precise control of flow/pressure by using a dedicated AMSR controller. It also offers excellent response and repeatability.

System Configuration

A feedback loop is formed by the AMSR controller that computes deviations between control signals from the machine side (speed and pressure commands) and sensor signals to drive the AC servo motor accordingly. Control parameters can be set digitally by using dedicated software.

Graphic Symbols

Single Displacement Type
ASR * - * - * - X * -

Dual Displacement Type
ASR * - * - * - W * -

Energy saving with low heat generation

These pumps run at a rotational speed suitable for mechanical requirements, eliminating unnecessary power loss. They minimize heat generation in the fluid and allow the use of a significantly smaller reservoir.

Example of Power Consumption by Pump Control Type

ASR Series	30~70	Reduction Rate 30-70%
04EH Type	60~80	
Load Sensing Type	100	

Low noise

The motor operates at near-zero speed during unloaded operation or pressure control, keeping the noise level extremely low.

High performance

The AC servo motor, which directly controls the pump speed, improves response and stability at low pressures and speeds.

Digital AMSR controller that saves space and wiring

The integration of the amplifier for the servo motor and the controller saves space and wiring. The parameters can be digitally adjusted in an easy and repeatable way.

Dual displacement type for a wider operation range

The dual displacement type has a solenoid operated directional valve to switch between large and small swash plate angles. A single pump unit of the dual displacement type can operate both with low pressure/large flow and with high pressure/small flow. Thus, in comparison to the single displacement type with the same motor capacity, the dual displacement type covers a significantly wider range of operating pressures and flow rates.

Large flow

The AMSR controller has a combination function that supports operation with large flow up to 3200 L/min (ASR10 x 16 units).

★1. To order an AC servo motor driven pump separately for spare use, prefix "N-" to the model number and omit the Function Selection and Parameter Number.

Example) N-ASR3-4G-HXSA100N-11

★2. For the relationship between the power capacity and the pressure/flow in terms of specification limits, see charts on pages 8 and 9.

★3. When selecting the power capacity "E", only an input voltage of AC 200 V is available.

★4. Types shown in the shaded areas are optional. Check the delivery date before selecting them.

★5. This is applicable only when "W" is selected for flow setting.

★6. For combination operation, consult us separately regarding the types of hydraulic circuits, components, and electric cables.

Solenoid Ratings

Dynamic Brake

Specifications

AMSR Controller Model Numbers	Dynamic Brake Model	Qty.	Permissible Regeneration W	Regeneration with Fan W	Resistance Ω	Mass kg
AMSR-2FGI-	GRZG400-1.5 Ω	4	500	800	6 (1.5 Ω × 4)	3.2 (0.8kg × 4)
AMSR-2HJL-	GRZG400-0.9 Ω	5	850	1300	4.5 (0.9 Ω × 5)	4.0 (0.8kg × 5)
AMSR-2KMO-	GRZG400-0.6 Ω				3 (0.6 Ω × 5)	
AMSR-4FGI-	GRZG400-5.0 Ω	4	500	800	20 (5.0 Ω × 4)	3.2 (0.8kg × 4)
AMSR-4HJL-	GRZG400-2.5 Ω	5	850	1300	12.5 (2.5 Ω × 5)	4.0 (0.8kg × 5)
AMSR-4KMO-	GRZG400-2.0 Ω				10 (2.0 Ω × 5)	

★1. Dynamic brakes are included with the ASR pumps.

★2. Dynamic brakes may become excessively heated. Use heat-resistant and fireproof wires and avoid their contact with the brakes.

Connection

★Recommended fan capacity for fan cooling. In this case, change the setting of parameter No. PA02 from "0000" to "00FA".

"F5" Series Pipe Flange Kits

4 Bolt Solid Flanges (SAE)

The dimensions of the flange mounting surface are based upon SAE 4 Bolt Split Flange (Standard Pressure Series).

★1. Approx. mass is the value including socket head cap screw (4Pcs.).

★2. The values of tightening torque above apply to when these flanges are used for pressure line.

Air Bleed Valves

These air bleed valves are designed to use, at the start-up of the pumps, to bleed off the air enclosed in the suction line or the other lines in the system.

Specifications

Model Numbers	ST1004-2-1002	ST1004-5-10	ST1004-10-10
Description			
Port Size	Rc 3/8 Thd.		
Max. Operating Pressure	25 MPa		
Reseating Pressure	0.15 MPa		
Cracking Pressure	0.34 MPa		
Flow Rate to Reseating	2 L/min	5 L/min	10 L/min
Range of Usage to Pump Output Flow	For Under 20 L/min	For 20 to 75 L/min	For Over 75 L/min

Graphic Symbols
